Integration Partner Program

The real value of your JetAdvice data comes when data is integrated with the backend systems you use on a daily basis. At JetAdvice we offer several ways to integrate data successfully.

Commitment to deliver

EuroForm's Integration Partner certification is secured through training delivered by EuroForm developers. This training will focus on basic knowledge transfer of the API and specific training for your needs.

Opportunities at a glance

As a certified Integration Partner you will get the full benefits of the JetAdvice API for your own business. You will also be able to redistribute licenses to other JetAdvice partners, leading their integration projects as a third party expert. The program also provides business opportunities; discounts will be provided on Licenses and Add-ons.

Certification

EuroForm developers will host a five hour certification training session, which will end with a certification test to ensure the quality of the education.

After the training you get direct access to technical support both via email and live session. Certification completion means you comply to the fair use model, explained below.

Prerequisite
The person taking the certification must be a developer and be familiar with .NET and OOP. The training will be done in C#.

Licenses

A license is required to use the API Client. One per machine (e.g. PC) accessing the API.

Test account

A test account is provided to allow new API Client users to test and perform quality assurance. This makes it easier to develop and test without consuming the production accounts' requests. The account will not have any fair use limits as long as the requests are test related with the purpose to make code running under the fair use limit in production.

Columns per view

Data from the API is provided from Views in JetAdvice Manager. The dataset can have different sizes based on the partner level.

Maintenance

The API will evolve over time. To secure the latest feature set and up-to-date knowledge, it is highly recommended to sign up for the yearly Maintenance agreement. Support is always based on the latest version of the API Client.

Support

EuroForm's support and development teams are available for all partner levels. You can get support via email or live support. Makes sure to sign up to the right partner level.

API Client

The API Client is a DLL (.NET) using the API endpoints to provide functionality in an easy to use manner.

The purpose of the API Client is to provide developers benefits like: Secure connection, reliable, error handling, HTTP and REST handling, OData handling, minimized request usage, request monitoring, speed optimization, configurable settings.

API Events

The ongoing development of the API will be introduced at Live events or even in person; providing face-to-face introduction of enhancements and new features.

Fair use

Fair use includes an amount of free requests per account per month. A request is only consumed, when the service can identify the user and sends a response.

Each request will be withdrawn from the API user's own account, unless the request is an "account specific request" (e.g. get a view from a specific account), then the free request is used from that specific account.

Free requests, used prior to prepaid requests, will be consumed on a first come, first served principle. An example of that is when several users are using the API making requests.

	Standard	Strategic	Premium
Certification	1	1	1
API training	–	Yes	Yes
Printed Certificate	Yes	Yes	Yes
Licenses	1	1	6
API Client (.NET dll)	–	Yes	Yes
API Client Source (C#)	–	–	Yes
Request per Account	100 per month	100 per month	200 per month
Coloums per view	25	25	50
API Event	–	Invitation	Free
Test Account	–	Yes	Yes
Mail Support	–	Yes	Yes
Live Support	–	–	1⁄2 hour/month
Discount for Add-Ons	0%	15%	25%
