JetAdvice Edge

Because nobody should settle for standard data collection

JetAdvice Edge is our new Connector (DCA) that raises the bar for the collection of printer fleet data.

We've developed and designed it from the ground up – with intelligence, security, and accuracy in mind.

JetAdvice Edge is engineered by our own experienced developers and brings you intelligent data collection – smart intervals, bulletproof security, and simplicity of installation. It's ready for multiple platforms right out of the box.

The infrastructure is "Secure by design" – and JetAdvice Edge is Enterprise Ready.

JetAdvice Edge works with JetAdvice Manager, JetAdvice Premium, and JetAdvice Connect to provide top-class remote monitoring and remote management of printer fleets.

Who will benefit from using JetAdvice Edge?

JetAdvice Edge is for Office Equipment/Technology Dealers, Managed Services Providers, Distributors and Vendors managing printer fleets and/or securing printer supplies.

These organizations will be able to offer their end customers and partners a more secure, intelligent, and accurate way of collecting printer fleet data

Benefits

- Secure by design
- Smart Interval Collection
- Enterprise Ready
- Cross-Platform
- Certificate provided by Sectigo Limited
- Easy, fast, simple and predictable
- Auto updates – if you like
- Responsive client (to UI commands)
- Supports SNMPv1, 2 and 3

About EuroForm

EuroForm A/S is the company behind the JetAdvice brand. We are an independent software development company, based in Denmark.

We are committed to adding true value to customers through providing second-to-none solutions that optimize and enhance the use of laser printers and multifunction devices.

Features

The benefits of using JetAdvice Edge are many. We've listed some of the most important features below.

Cross-Platform

By design, JetAdvice Edge is ready for all new and future platforms. Windows® is still #1 platform – with Linux® + Raspberry Pi® as a strong #2. We support other platforms as well – just ask.

Security – SNMPv3 support

End-to-end security is becoming the new standard. When using SNMPv3, you get proven and full support from your devices to JetAdvice Edge. Your data will be safe with us – all the way.

Enterprise Ready

JetAdvice Edge is Enterprise Ready by design. With a security-first approach, we made our safest and most intelligent Connector yet. It reduces local and cloud network traffic, secures HTTPs and supports SNMPv3. Configure it locally or from the cloud. Best-in-class device discovery and intelligent data collection.

Secure by design

Our experienced developers only write code that is secure by design. All our software engineering is done from the ground up, using best security practices. The same obviously goes for JetAdvice Edge.

IPv6

Upgrading from IPv4 to IPv6 could be a smart move. The upgrade may be necessary due to the limited amount of IP addresses in IPv4. We fully support IPv6 – it's ready to use at your customers.

Smart Interval Collection

JetAdvice Edge automatically adapts to the individual demands of supplies, counters, and hardware alerts. The collection intervals adjust to each device on the network. Smart Interval Collection is a new, intelligent way of collecting printer fleet data.
